

Project Initialization and Planning Phase

Date	28 June 2026
Team ID	
Project Name	A Comprehensive Measure of Well-Being (HDI Prediction System)
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A policymaker or researcher wanting to assess human development levels across countries	Understand and predict the HDI score of a country based on key development indicators	HDI data is complex, scattered across 82 columns and difficult to interpret manually	There is no simple tool available to quickly predict HDI category from basic indicators like life expectancy, schooling and income	Overwhelmed and unable to make quick data-driven decisions about development priorities
PS-2	A government official responsible for national development planning	Compare HDI scores across countries and identify areas needing improvement	Manual analysis of 195 countries across multiple dimensions is extremely time consuming	No automated prediction system exists to classify countries into Low, Medium, High or Very High HDI categories instantly	Frustrated with slow analysis process and inability to prioritize interventions effectively
PS-3	A student or academic researcher studying global human development trends	Explore relationships between HDI indicators like life expectancy, schooling and GNI per capita	Raw datasets from UNDP are large and require extensive preprocessing before any analysis can be done	No ready-to-use interactive application exists to input country indicators and instantly see predicted HDI classification	Discouraged by the complexity of data and lack of accessible tools for quick HDI prediction and analysis
