

Empathy Map

Date	28 June 2026
Team ID	
Project Name	A Comprehensive Measure of Well-Being (HDI Prediction System)
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS - I need a quick way to predict the HDI category of a country - Manual analysis of 195 countries takes too much time - I wish there was a simple tool where I enter indicators and get the HDI result instantly		THINKS - Predicting HDI from basic indicators like life expectancy and GNI should be automated - Machine learning can simplify the complex multi-dimensional analysis of human development - A web-based prediction tool would help policymakers make faster data-driven decisions
	PERSONA NAME Dr. Priya Sharma <i>(Policy Researcher / HDI Analyst)</i>	
DOES - Manually downloads and analyzes large HDI CSV datasets from UNDP or Kaggle - Inputs country-level development indicators into spreadsheets for comparison - Uses the Flask web application to enter HDI indicators and get instant predictions		FEELS - Overwhelmed by the complexity of large multi-dimensional HDI datasets - Frustrated by the lack of simple tools for quick HDI classification and prediction - Confident and empowered after using the ML-powered Flask application for instant results
